## Node Search

MAC, Hostname, IP, NetBIOS:

\* and ? are wildcards.

Time Stamps:  On  Off

Archived Data:

Show Vendor :  On  Off

[\[Clear\]](#)

## Advanced Node Search

### [\[+\]](#) [Search on Vendor or OUI](#)

### Specific Searches

- These aren't guaranteed to be wireless access points, they just have MACs that fall into the right range. Also remember people can hide them under fake MAC addresses as well.
- 

\* Advanced Searches can be slow to load.
